Email Alerting Services

Ingenta's Research Alerting Services - keeping you abreast of current issues in your field of research with minimal effort.

Help researchers at your institution keep up-to-date with the latest news in their chosen field with current awareness tools that are expansive in content coverage, but also cost-effective and easy to manage. Administrators and researchers can benefit from Ingenta's Research Alerting Services in the following ways:

Benefits for researchers:

- Unlimited new issue alerts and saved search alerts expand the possibilities for current awareness
- Extensive coverage, including 28,500 publications available for new issue alerts, allows researchers to keep up-to-date with their core research journals
- Saved search alerts inform researchers of new and relevant articles direct to their inbox. Searches cover 28,500 journals within the following disciplines:

Agriculture & Food Sciences
Arts & Humanities
Biology & Life Sciences
Chemistry
Computer & Information Sciences
Earth & Environmental Sciences
Economics & Business
Engineering & Technology
Law
Mathematics & Statistics
Medicine
Nursing
Psychology & Psychiatry
Physics & Astronomy
Philosophy & Linguistics
Social Sciences

- Format options for emails (plain text, HTML, or EndNote), give researchers the information they want in the format most helpful to them
- Direct access to articles, making research quick and easy, is available by following the links in the alerts. If you have activated a subscription to the journal publishing the article, users will enjoy seamless access from the alert to the full-text. If a subscription is not held researchers can use pay-per-view services to obtain the full article.

Benefits for administrators:

- Customized messaging around the alert allows you to keep your patrons informed about library services, and aware that their research services are available courtesy of the library
- Usage monitoring lets you learn more about your patrons and your collection. View the issue alerts and saved search alerts requested by each user, and view the number of user requests per journal
- Access settings allow you to provide the widest possible service without compromising on security. Manage the email domains permitted to receive alerts and the proxy settings used by off-site researchers.
